60 Minutes: Diagnosis Autism (DVD 2007)

“AIR Date: 02/18/07
How early can a child be diagnosed with autism? Researchers at the University of California's M.I.N.D. Institute are trying to identify the symptoms in children as young as 1 year old. Even infants are being screened for early warning signs of this neurological disorder.”

ScienceDaily (Nov 2011)— People who eat baked or broiled fish on a weekly basis may be improving their brain health and reducing their risk of developing mild cognitive impairment (MCI) and Alzheimer’s disease, according to a study presented November 30 at the annual meeting of the Radiological Society of North America (RSNA).

“This is the first study to establish a direct relationship between fish consumption, brain structure and Alzheimer's risk,” said Cyrus Raji, M.D., Ph.D., from the University of Pittsburgh Medical Center and the University of Pittsburgh School of Medicine.
Writers on the Spectrum (2010)

“From Hans Christian Andersen’s fairytale characters to Lewis Carroll’s “Wonderland” and Emily Dickinson’s poetic imagery, the writings and lives of some of the world’s most celebrated authors indicate signs of autism and Asperger’s Syndrome...will be of interest to anyone with a professional or personal interest in literature or the autistic mind.”

ADHD—Living Without Brakes (2008)

“Everybody thinks they know what ADHD is all about -- hyperactivity and inattentiveness, right! -- but Kutscher stresses that the disorder is even more about an inability to organize and an impairment of the brain’s executive function. Applying that knowledge to your child can help you focus on ways to help and support, not stress and depress.”
