## The Library's Latest: A Note from the Coordinator

January 2012

—Over the past month the library had the following circulation statistics:

- Checkouts: 20
- Renewals: 3
- Information Requests: 50
- Web articles/printouts sent out: 70
- Pamphlets sent out: 2
- New Patrons: 2
- Mediated Searches: 5
- Out of State Requests: 3

• Web Sites' Page Visits:

- CDR Library: 214
- Library Blog: 2849
- CDR: 284
- TECS: 671
- Supported Living: 32
- InfoAble Portal: 40

—Make sure to check out the list of **New Additions** on the newsletter's left side column and on the subsequent pages.

Spotlight on These New Additions...

Disconnected Kids (2010)

"Written in an accessible style, Disconnected Kids shows parents how to use this drug-free approach at home, with customizable exercises for physical, sensory, and academic performance, advice for behavior modification, information on foods to avoid, and a follow-up program for lasting results."

Intellectual Disabilities at Your Fingertips(2009)

"Cleveland Clinic's Dr. Carl Tyler, MD, presents a new pocket reference on medical issues and intellectual disabilities. This unique guide offers reliable, up-to-date information on: - General issues, such as disability classification, communication challenges, functional analysis, regulations and informed consent..."

60 Minutes: Diagnosis Autism (DVD 2007)

"Air Date: 02/18/07 How early can a child be diagnosed with autism? Researchers at the University of California's M.I.N.D. Institute are trying to identify the symptoms in children as young as 1 year old. Even infants are being screened for early warning signs of this neurological disorder."

ScienceDaily (Nov 2011)— People who eat baked or broiled fish on a weekly basis may be improving their brain health and reducing their risk of developing mild cognitive impairment (MCI) and Alzheimer's disease, according to a study presented November 30 at the annual meeting of the Radiological Society of North America (RSNA).

"This is the first study to establish a direct relationship between fish consumption, brain structure and Alzheimer's risk," said Cyrus Raji, M.D., Ph.D., from the University of Pittsburgh Medical Center and the University of Pittsburgh School of Medicine.

## Spotlight on These New Additions...

### Writers on the Spectrum (2010)

“From Hans Christian Andersen's fairytale characters to Lewis Carroll's "Wonderland" and Emily Dickinson's poetic imagery, the writings and lives of some of the world's most celebrated authors indicate signs of autism and Asperger's Syndrome...will be of interest to anyone with a professional or personal interest in literature or the autistic mind.”

### ADHD—Living Without Brakes (2008)

“Everybody thinks they know what ADHD is all about -- hyperactivity and inattentiveness, right? -- but Kutscher stresses that the disorder is even more about an inability to organize and an impairment of the brain's executive function. Applying that knowledge to your child can help you focus on ways to help and support, not stress and depress.”

### Autism and Asperger Syndrome in Schools (2010)

“This book offers a balance of conceptual, practical and empirical information designed to bridge the research-to-practice gap in identifying, assessing, and treating school-aged children with autism-related conditions. Assessment tools and intervention strategies will support school-based professionals...”

*“I go into my library and all history unrolls before me.”*

Medical News Today (Dec 2011) — Many disabled children fail to reach their full potential because they continue to be marginalised in schools, health and social care, according to new research funded by the Economic and Social Research Council (ESRC).

“We found that disabled children often experience discrimination, exclusion and even violence,” say Professor Dan Goodley and Dr Katherine Runswick-Cole, who implemented the study at the Manchester Metropolitan University. “The biggest barriers they meet are the attitudes of other people and widespread forms of institutional discrimination.”
